

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

**Listing of the Claims:**

1. (Currently Amended) A system comprising:  
  
an input component to receive an image, the input component including a lens of a digital camera or video camera, and the image is a still or video image, respectively. ;  
  
a locator to provide a place stamp associated with the image;  
  
memory, wherein the locator includes a global positioning system;  
  
a component to determine a distance between the system and at least a portion of the image and  
  
a processor to store the image and the place stamp in the memory in response to a triggering event, wherein the place stamp includes an indication of a latitude and longitude of the system or of the image.

2. (Cancelled)

3. (Cancelled)

4. (Cancelled)

5. (Cancelled)

6. (Cancelled)

7. (Original) The system of claim 1, wherein the triggering event is the pressing of a button to take a picture or video.

8. (Currently Amended) A method comprising:

providing a handheld camera with a locator to provide a place stamp,  
wherein the locator includes integrating a global positioning system into the camera; and

enabling a user of the camera to store the place stamp associated with an image captured by the user using the camera, including providing the camera with a button to take a picture or video and to automatically store the place stamp;

providing the camera with an output port and software, the output port to download the image and the place stamp to a computer system, the software, when executed by the computer system, to convert the place stamp from a first format to a second format, wherein the first format includes latitude and

longitude information, and the second format includes nomenclature information.

9. (Cancelled)

10. (Cancelled)

11. (Cancelled)

12. (Cancelled)

13. (Currently Amended) A machine-readable medium including machine-readable instructions that, if executed by a computer system, cause the computer system to perform a method comprising:

downloading an image and a place stamp associated with the image from a camera;

converting the place stamp from a first format into a second format,  
wherein the first format includes latitude and longitude information, and the second format includes nomenclature information;

accessing a remotely located server via an internet, and converting latitude and longitude information into nomenclature information, wherein the nomenclature information includes a city name; and

storing the image and the place stamp in the second format.

14. (Cancelled)

15. (Cancelled)

16. (Cancelled)

17. (Currently Amended) A system comprising:

an input component to receive audio or video ~~multimedia~~-data;

a locator to provide a place stamp associated with the audio or video ~~multimedia~~-data, the locator includes a global positioning system;  
memory; ~~and~~

a processor to store the audio or video ~~multimedia~~-data and the place stamp in the memory; and

program code that, when executed, causes the system to convert the place stamp from latitude and longitude information into nomenclature information.

18. (Cancelled)

19. (Cancelled)

20. (Cancelled)
